

PCA Engineering provides Metal Protectors specific to the Petroleum and Marine Industry including the following immediately delivery items:

Emitters

Emitter disks are 2 3/16" round, and up to only 1/4" high. Rust Stop 5 Disks protects 5 cu. ft. of space; Rust Stop 10 Disk protects 10 cu. ft. of space. Both are easy to install by simply peeling off the adhesive strip backing and pressing the emitter onto a flat surface inside the confined space. The protective vapors begin to work immediately, and last for up to 2 years.

Powders

Water-soluble Rust Stop Powder is specially designed to protect the interior metal surfaces of enclosed systems such as the interstice of double walled steel tanks or ballast areas of boats. Apply by dusting or sprinkling, fogging into the enclosed space with a low-pressure air hose, or dissolve in water. The powder is safe and environmentally friendly.

Choose from Rust Stop Powder 1000SF for ferrous metals or Rust Stop Powder 1010SFG specifically designed for specific metals.

LIQUIDS

Rust Stop 1200 – is a water solution designed to protect interior metal surfaces of tanks, dispensers, engines and pipelines. It provides continuous corrosion protection for ferrous metals, and is compatible with copper and galvanized steel. The clear, odorless liquid typically does not need to be removed prior to equipment restart.

Rust Stop 3100 – is used outdoors on ferrous and non-ferrous metals in either protected or unprotected storage. It is a heavy, amber oil to apply by dip, spray or brush. It dries to a firm, waxy film that can be handled after 3-6 hours and sets up in 12-24 hours. Corrosion protection is effective for 1-3 years.

Rust Stop 9900 - is an environmentally friendly, water-based barrier coating for interior steel equipment. It's also compatible with zinc, brass, cadmium, aluminum, and non-ferrous metals. Apply the amber-colored liquid by dip, spray or brush. It dries to a firm, tacky film that is not water-soluble.

AEROSOLS in 11 oz Cans

Rust Stop 1101 - protects metals inside closed systems, including tanks, pumps, piping and combustion engines.

Rust Stop 3100 - keeps rust from forming on equipment that is stored in severe outdoor environments and temperature extremes.

Rust Stop 5300 - is a ready to use corrosion preventive spray that protects the internal working of equipment and machinery while in storage.

STRETCH WAP

Rust Stop 3000 Stretch Wrap - is the convenient way of protecting petroleum and marine components going into long term storage. Strong, tear-resistant transparent.

WIRE

Rust Stop 2000 Wire - protects metal tubing, pipes, cylinders and hard-to-reach

areas. The blue LDPE wire, 1/8" diameter provides superior multi-metal corrosion protection.
